

SensusAccess Inside Brightspace

SensusAccess aims to empower students with disabilities, promote independence and self-sufficiency, and support inclusive education. **SensusAccess Inside Brightspace** is a tight integration into the popular LMS/VLE platform, providing faculty and students with powerful, fully automated document conversion and remediation capabilities right at their fingertips.

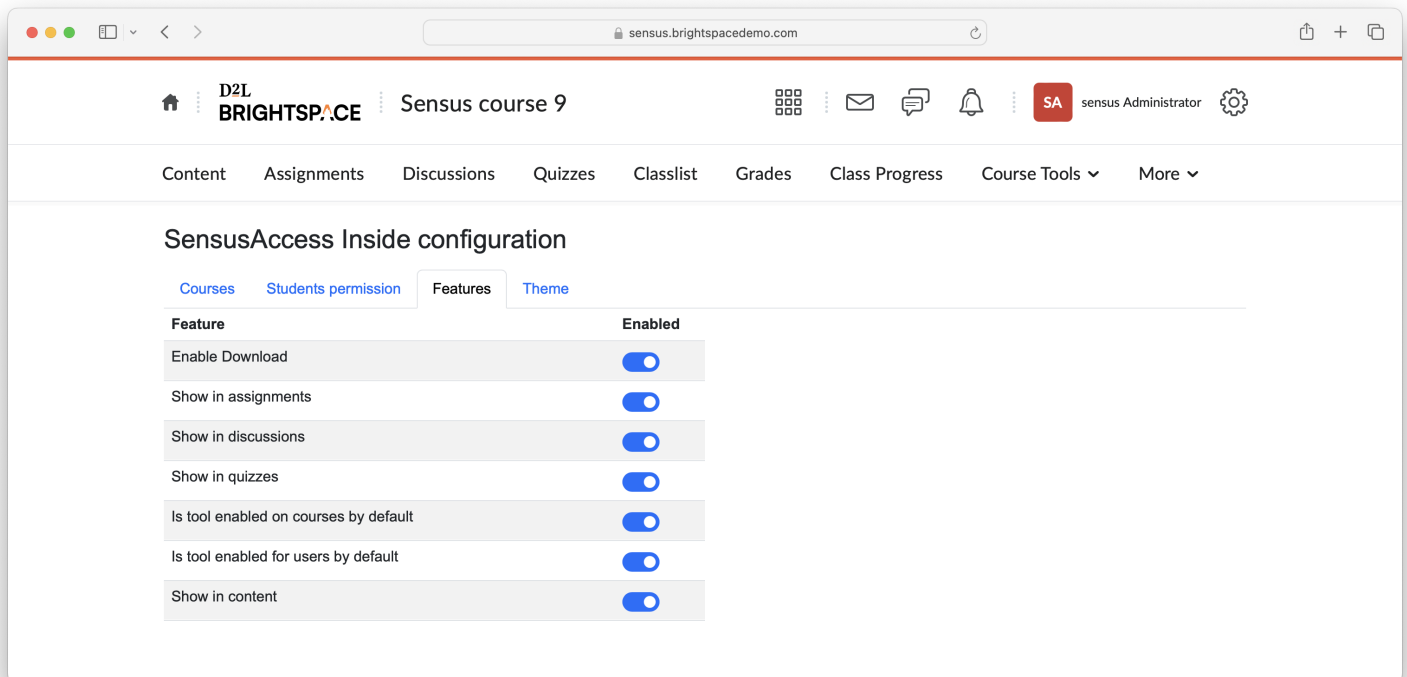

Breaking down barriers by enabling people with disabilities to easily convert documents into alternate and more accessible formats — whenever and wherever these are needed — is the core mission of SensusAccess.

While educational material such as textbooks, journal articles, links to optional readings, lecture notes, presentations, hand-outs, exercises and assignments may come from many different sources, the Learning Management System (LMS) or

Virtual Learning Environment (VLE) is an important repository for many formal learning resources.

SensusAccess Inside Brightspace makes document remediation and conversion of course material into audio books, digital Braille, digital large-print, e-books and other accessible formats available directly from within Content, Assignments, Discussions, and Quizzes. Converted documents can be downloaded directly or delivered to the email inbox of the user.

SensusAccess Inside Brightspace is implemented in accordance with best implementation practices and security recommendations provided by D2L, the developer of Brightspace. The tool is easy to set up and offers a fast, safe and secure integration between SensusAccess and Brightspace.

SensusAccess Inside Brightspace is configurable directly from within Brightspace and instructors are free to enable or disable the tool on a per-course basis as they see fit.

SensusAccess Inside Brightspace is an add-on to SensusAccess and requires a current subscription. Contact a SensusAccess representative to learn more or visit <https://inside.sensusaccess.com>

SensusAccess and **SensusAccess Inside Brightspace** are powered by the award-winning **RoboBraille®** service.

SensusAccess and **SensusAccess Inside Brightspace** are developed by Sensus ApS, a research-based consultancy organization with more than 30 years of experience in digital accessibility and inclusion technology. Based in Denmark, Sensus ApS is also the developer of the award-winning RoboBraille® service.
